DETAILED ACTION

Response to Amendment

The Amendment, filed on 12/18/2003, has been entered and acknowledged by the Examiner.

Cancellation of claims 1-5 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kobayashi et al. (US 4,818,919).

Regarding claim 6, Kobayashi discloses (see figure 1) a CRT including a panel, electron gun, deflection coils, screen, bulb, and an inner pincushion distortion correction circuit connected in series with the vertical deflection coil. Further (see figure 4) Kobayashi discloses a correction coil (52) being provided at the same side of the electron gun as the deflection yoke and providing a deflection force. Further Kobayashi discloses a pair of diodes (70) having reverse polarities and connected in parallel with each other and in series to the correction coils (52) forming a diode coil series circuit. The diode coil series circuit is then placed in series with the vertical deflection coils. Kobayashi does not appear to specify the use of a resistor in parallel

with the diode coil series circuit however the inclusion of a resistor in parallel with a circuit element is well known in the art to reduce the current in the circuit without substantially affecting the voltage characteristics. Further the use of a resistor in the diode coil series would beneficially allow for customization of the corrective force intensity in the correction circuit. Thus, it would have been obvious at the time the invention was made to a person having ordinary skills in the art to incorporate a resistor in parallel with the diode coil series circuit into the device as disclosed by Kobayashi in order to beneficially allow for customization of the corrective force intensity in the correction circuit.

Response to Arguments

Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.
